

Dekho

Updated Product Definition Document

Consumer Fintech | Personal Finance | Behavioral Finance

Document purpose	Refresh the original product definition with the redesigned feature set while keeping Dekho's habit-first, behavior-first positioning intact.
Main update	Add budgeting and savings goals, a simplified financial behavior dashboard, and a clearer investment / asset opportunity layer based on the user's financial profile.

1. Product Overview

Product Name: Dekho

Category: Consumer Fintech / Personal Finance / Behavioral Finance

Type: Habit-first personal finance companion

One-line definition: Dekho is a habit-first personal finance companion that helps users understand their relationship with money, build better financial habits, plan money goals, and gradually create assets.

2. Core Problem

Most people use digital payments every day, but they still do not clearly understand where their money goes, how they behave financially, or what they should do next.

- Traditional finance apps are often too transactional: they track, budget, and push products, but they do not explain the user's behavior in a simple way.
- Many users want clarity, not pressure. They need a calm system that helps them see their money patterns before they are pushed into complex decisions.
- The real gap is not only financial tools. It is financial awareness, clarity, confidence, and habit formation.

3. Product Philosophy

Principle	What it means in Dekho
Understanding before advice	Observe first, explain second, guide third.
Habit before optimization	Build everyday awareness before demanding perfect budgeting or investing behavior.
Personalization before rules	Shape the experience around goals, behavior, and financial stage.

Principle	What it means in Dekho
Emotional safety before numbers	Reduce confusion, anxiety, and guilt rather than overwhelming users with charts.

4. Product Vision

Dekho is designed to move the user through a clear journey: Clarity → Awareness → Habits → Confidence → Asset Creation.

The product should feel like a calm financial companion that helps users understand their money, not a noisy dashboard that demands action too early.

5. Target Users

- Young earning individuals aged 18 to 35 in India who use UPI heavily and want to improve their money habits.
- First-time earners, students starting to earn, and working professionals who are still building financial confidence.
- Users who want a simple, personalized view of their spending, savings, assets, and next-best actions.

6. Core Value Proposition

- Automatically track expenses and categorize them in a way that feels effortless.
- Show a simple financial overview of spending, savings, assets, and investments.
- Explain financial behavior in plain language so users can understand patterns, triggers, and progress.
- Help users plan budgeting and savings goals without making the product feel rigid.
- Suggest suitable investment and asset creation opportunities based on the user's financial profile and stage.

7. Updated Feature Set

The redesigned product keeps the original foundation and adds a stronger planning and recommendation layer.

Module	Core capability	Why it matters
Expenses	Auto tracking, auto categorization, history, spending breakdown	Removes manual effort and keeps the user's day-to-day behavior visible.
Home dashboard	A simple personalized overview of spending, savings, assets, and trends	Makes the app feel easier to understand and more useful at a glance.
Behavior	Pattern insights, emotional triggers, and time-based analysis	Turns transactions into usable self-awareness.
Assets	Savings, investments, net worth, growth trends	Helps the user track wealth, not only spending.

Module	Core capability	Why it matters
Opportunities	Investment and asset creation ideas based on the user's profile	Moves the product from tracking into guided progress.
Ask Dekho	AI chatbot for finance questions and personal guidance	Gives the user a direct conversational way to explore their finances.
Budgeting and goals	Budget planning, savings targets, and progress nudges	Adds an intentional planning layer to the product.

8. Relationship With Money Framework

- Spending awareness
- Emotional spending triggers
- Spending identity
- Impulse vs intentional spending
- Saving behavior
- Risk attitude
- Financial confidence

9. Emotional Goal

"Manage your money in a way that helps you sleep at night."

Dekho should create financial clarity, stability, confidence, and peace of mind.

10. App Structure

Dekho can keep a bottom navigation model, with a persistent Ask Dekho assistant available across the product.

Tab / entry point	Purpose	Primary content
Behavior	Explain financial behavior	Spending patterns, emotional signals, weekly insights
Expenses	Auto expense tracking	Auto tracking, categorization, transaction history
Home	Simple personalized overview	Today's spending, AI insights, savings potential, financial summary
Assets	Track wealth and growth	Net worth, savings, investments, growth trends
Opportunities	Show next steps	Investment suggestions, savings opportunities, asset recommendations
Ask Dekho	AI financial companion	Floating chatbot for questions and guidance

11. Onboarding Flow

- Consent screen for financial data, SMS access, and bank access.
- Purpose selection so the user can choose what they want Dekho to help with: saving, expense tracking, asset creation, spending understanding, budgeting, or goal planning.

- Personalization setup so the home screen and recommendations adapt to the user's goals and financial stage.

12. AI Chatbot: Ask Dekho

Ask Dekho is the user's always-available finance companion.

- Where did I spend the most?
- How much can I save this month?
- What patterns do I keep repeating?
- Which investment or asset-building options fit my profile?

The chatbot should feel practical, contextual, and tied to the user's own data rather than generic finance advice.

13. Personalization Strategy

- User goals
- User behavior
- Financial stage
- Usage patterns
- Comfort level with finance

Personalization should affect the dashboard layout, insight wording, recommendations, and the type of nudges shown to the user.

14. Differentiation

Traditional finance apps usually stop at tracking, budgeting, or product pushes. Dekho combines behavior understanding, habit-building, personal planning, and guided asset creation in one experience.

- It explains money behavior instead of only recording transactions.
- It supports planning instead of only showing numbers.
- It suggests next steps based on the user's financial profile instead of sending generic recommendations.

15. End Goal

- Help users understand their money.
- Help users build better financial habits.
- Help users gain confidence.
- Help users create assets over time.

16. MVP Scope

- Onboarding
- Home dashboard

- Behavior screen
- Expense screen
- Assets screen
- Opportunities screen
- Budgeting and savings goals
- Ask Dekho chatbot

17. Final Product Statement

Dekho helps people understand their relationship with money, build better financial habits, plan savings and budgets, and gradually create assets while giving them peace of mind.

18. Summary of Changes in This Revision

- Kept the original habit-first, behavior-first identity.
- Added explicit budgeting and savings goal planning.
- Strengthened the asset and investment dashboard.
- Made the recommendation layer more clearly tied to the user's financial profile.
- Reframed the home experience as a simple, personalized financial overview.
